As a mother I strongly object to  
the proposed Cabrillo Port LNG Deepwater Port.

I believe the report from 1977 by the  
scientists, the US Coast Guard and the Federal  
Bureau of Mines ~~for~~ still holds important  
issues. Just as the assumptions in 1977 may be untested, this <sup>EIS/EIR's</sup> ~~report~~ <sup>data is also</sup>  
I believe we need to pursue other safe <sup>untested</sup>  
clean renewable forms of energy - like solar power.

No action will be taken until the environmental review process is completed.

G087-1

Sections 2.1 and 4.2.7.3 contain information on design criteria and specifications, final design requirements, and regulations governing the construction of the FSRU and LNG carriers.

G087-2

Sections 3.3.1 and 3.3.2 address conservation and renewable energy sources, within the context of the California Energy Commission's 2005 Integrated Energy Report and other State and Federal energy reports, as alternatives to replace additional supplies of natural gas.

Topic: Other/General Comment  
Comments: I just wanted to write a short comment on this subject. I would like to voice my support for this project and point out that I appreciate a company like BHP Billiton coming over here and proposing such a concept and the fact that they put so much thought into the entire process . I've read into the companies safety and accident backround and it is unmarked. This is something I ,as a parent am very , concerned with. I feel that with all of the precautions being taken to prevent any accidents and the potential effect that Cabrillo Port will have on California this should happen. Thank You.

G080-1

Comments (Use other side or attach additional sheets if necessary): I send / responded  
to BHP for more info... all that was sent to me was a glossy  
plier with a "word of safety". How can they make GAS safe -  
and under so much (cooled) pressure. I feel that BHP  
is counting on us - the Public being not informed.  
How about Real Safety Records + Non Death - or  
Injury accident data?

G080-2

No action will be taken until the environmental review process is completed.

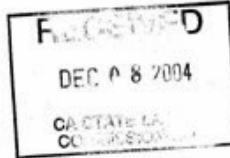

G080-1

LNG is not stored at high pressure. It is stored as a very cold liquid at approximately atmospheric pressure (see Sections 2.2.2.3 and 4.2.7.1).

G080-2

Section 4.2 discusses public safety and Appendix C3-1 identifies historical LNG accidents. Section 4.2.7.4 discusses LNG carrier accident history, and Section 4.2.8.1 discusses historical natural gas pipeline incidents.

Dr. B. Dean  
2991 Apache Avenue  
Ventura, CA 93001

Dear *Decision makers,*

Wishin' doesn't make it so...trust the political alliance with BHP money and favors cast like votes?

A Spending bill squeaks through Congress with energy wording tacked on last minute giving potentially hazardous siting power to Federal decision makers? There is no guarantee of future foreign fossil fuels (LNG) costing less.

Given the time past, it appears that the improved BHP Pacific campaign is better at Political sway, hoodwinking and arguments for clean fuel. Many people in Oxnard who are directly effected do not know that High Pressure Liquid Natural Gas is hazardous. Public sentiment is stirring up against the Cabrillo Port and Crystal Energy Site, but did Congress take away our LNG voice and choice? Oxnard is a perfect target for a political sweep. The residents are varied including many nonvoters who fear repercussion regarding immigration laws, i.e. Immigrant driving licenses revoked by the state. LNG "experts" talked of accident prevention at the 11-30-04 ESR/EIR hearing but I was not convinced that the necessary controls to protect residents and the environment are in place. The Cabrillo Port magnifies uncontrollable risks. Hazards that exist (such as earthquake, tsunami near deep port, terrorist attack near military target, human error, misjudgment, experimental/ untested marine LNG facility, pipelines/ wilderness habitat soiled) can not be predicted & eliminated by better technology. The controllable issues have gone bad: market supply/demand (no proof of need), dependence on foreign fossil fuel, bribery, hoodwinking of community & political leaders, dictation of siting of LNG near families, schools and wildlife. The trade off is human cost v/s political marketing. Say NO to LNG. LNG is a foreign fossil fuel, nonrenewable, increases global warming and takes our focus off of renewable nonhazardous fuel sources if implemented could create needed jobs for the U.S. Thank you.

Dr. Bonnalynn Dean D.C. 2991 Apache Avenue Ventura, Ca 93001 12-3-04

*Dr BDean 12-5-04*

G106-1

Section 1.2.2 addresses this topic.

G106-2

As described in Chapter 2, LNG would only be present on LNG carriers and on the FSRU, which would be located 12.01 nautical miles offshore. LNG would be regasified offshore and transmitted as natural gas through subsea pipelines to onshore pipelines.

Section 4.2.8 contains information on safety requirements for pipelines. Section 4.13.1 discusses the proximity of the proposed pipeline routes to residences and schools.

G106-3

Section 4.11 contains revised information on seismic and geologic hazards and mitigation that specifically addresses the potential damage to proposed pipelines from a direct rupture along fault lines. Appendices J1 through J4 contain additional evaluations of seismic hazards.

G106-4

Table 4.2-2 and Sections 4.2.6.1 and 4.2.7.6 contain information on the threat of terrorist attacks.

G106-5

Sections 2.1 and 4.2.7.3 contain information on design criteria and specifications, final design requirements, and regulations governing the construction of the FSRU and LNG carriers.

G106-6

Section 1.2 discusses dependence on foreign energy sources.

G106-7

See the response to Comment G106-2.

G106-8

Sections 3.3.1 and 3.3.2 address conservation and renewable energy sources, within the context of the California Energy Commission's 2005 Integrated Energy Report and other State and Federal energy reports, as alternatives to replace additional supplies of natural gas.

Your statement is included in the public record and will be taken into account by decision-makers when they consider the proposed Project.

Comments: I love our beaches and I don't want to see another odd structure along the horizon. I was please to see that this port will be 14 miles offshore, not visible from the shore. As well, since it's a floating structure, there will be minimal damage to water quality. Unfortunately we are a society that consumes energy. We have to find the best ways to produce it. I believe this is one way. Good job to all who are involed with the development of this project.

unsafe area,

G072-1

All deepwater port applications fall under the authority of the Deepwater Port Act, which requires that a decision on the application be made within 330 days of the publication of the Notice of Application in the Federal Register. The Notice of Application for the Cabrillo Port Project was published in the Federal Register on January 27, 2004. As a result, the comment period could not be extended. However, a Revised Draft EIR was recirculated for an additional public review period of 60 days. Section 1.4.1 contains additional information on this topic.

Section 1.5 contains information on opportunities for public comment. The public will also have the opportunity to comment at a series of final public hearings, including a final public hearing conducted by MARAD and USCG with an associated comment period, and hearings by the California State Lands Commission and the California Coastal Commission. Comments received will be evaluated before any final decision is made regarding the proposed Project.

The proposed Project is a Federal and State action with approval required by the U.S. Maritime Administration and the California State Lands Commission. The input of local agencies, citizens, and communities is solicited and considered in the environmental and decision-making processes. Section 1.6 lists all of the permits required for the proposed Project.

G072-2

Sections 2.1 and 4.2.7.3 contain information on design criteria and specifications, final design requirements, and regulations governing the construction of the FSRU and LNG carriers.

Comments: The people who say they are against this project need to read the EIS/EIR a little better, the people need to know how this can better theirs and their children's lives. It also affects other people in the United States. This project is the beginning of a new start, of better rates and air quality. I'd like to Thank BHP for the outstanding amount of work that has been put forth to the Cabrillo Port project.

G133-1

Comments: Many say that there has not been enough public involvement. The NOI/NOP invited written public comments on the scope and content of the environmental information and analysis that should be included in the EIS/EIR. They listed date and location of the public meetings. NOI/NOP sent 94 by electronically mail, 63 interested parties were sent certified mail, and it was posted on the Federal Docket, the CSLC website. Nine hundred postcards announcing the scoping meetings and open house were mailed to landowners along the proposed and alternative routes for the pipeline. I could go on and on. This information is also found in the Executive Summary. Many People have been notified and many have stated there opinions in the meetings or like me in letters.

**G294**

Comments: As a Colorado resident I understand what a strain domestic drilling puts on our economy and natural resources. I am a firm believer that we need to explore our natural gas reserves here in Colorado but as we pump more and more natural gas to California we once again have to rely on foreign sources of energy. The Cabrillo Port project off the coast of Malibu is a wonderful project because we get natural gas from Australia, easing the burden on our state.

G294-1

Your statement is included in the public record and will be taken into account by decision-makers when they consider the proposed Project.

Topic: Other/General Comment

Comments: As an advocate for the expansion of domestic energy sources, I know the importance of also reaching out to our allies for energy importation. The proper balance between foreign and domestic sources of energy is key to keeping our energy bills low. The Cabrillo Port rig is an important project. Not only is it an important hub for natural gas importation but the approval of this project will set a good precedent for projects to come.

G386-1

Your statement is included in the public record and will be taken into account by decision-makers when they consider the proposed Project.

Comments: I believe in the importance of diversifying our energy sources. While expansion of our domestic energy sources is positive we need to not put a strain on these precious resources. We need to continue seeking foreign alternative energy sources even beyond the Middle East. Having a strategic partner like Australia is positive. Please do your part in this relationship by approving Cabrillo Port.

Topic: Socioeconomics  
Comments: Cabrillo Port is an environmentally friendly and responsible solution to providing energy to our state. We need more natural gas to drive down gas prices. Are storage is running thin all over the US and in Canada. If we don't find a way to produce more energy in a timely manners, we will suffer greatly. Please allow for this project to happen.

 Oxnard, Ca. 93030-8414

November 30, 2004

Ecology & Environment, Inc.  
 San Francisco, Ca.

Dear Mr. Cy Oggins,

My brief talk with you at the Oxnard Performing Arts Center today proved to be the best few minutes I have spent since the BHP/ Crystal energy proposals were brought to the public.

As you may recall, I voiced interest in the easements for laying the gas lines through the community. I located a young lady at the So. Cal. Gas table who referred me to the older gentleman fielding questions. This man stated the City Planner was responsible locally but at this point, no easements have been requested for proposed gas line placement.

One statement caught my attention from the Gas Co. Rep. He stated in defense of proposed 1100 psi gas lines close to hospitals & schools that this was already in place in Santa Barbara County with no problems to date. Although I declined to state my true response to the Gas Co. Rep. I felt one dangerous situation without any recorded casualties, certainly does not justify building another one.

G539-1

I certainly would like to see something in place by the owners of the pipelines to settle any death claims that may occur due to a gas line rupture for whatever reason.

G539-2

As stated today, my decision would be to sell my home if it should come to placing a pipeline on Gonzalez Rd.

I certainly do not envy you and your associates in the coming year.

I happen to mention serving time in Saudi Arabia at the So. Ca. Gas table. One young lady picked up on it & gave me some direct questions about DaHaran. When I finished my motor mouth reply, she had no more to say & am sure she was convinced I was not blowing smoke.

Bottom line is like a Navy card game. Losers cry no fair & the winner says deal the cards.

I want to thank you and the other panel members who traveled to the meeting to listen to residents who probably are presenting points that have already been documented. I wish you well.

Sincerely,

*W. L. Donaldson*  
 W. L. Donaldson

G539-1

Section 4.2.8 contains information on safety requirements for pipelines. Section 4.13.1 discusses the proximity of the proposed pipeline routes to residences and schools.

G539-2

Section 4.2.5 contains information on liability in case of an accident and reimbursement for local agencies.

**All comments must be received by 2 p.m. PST, December 20, 2004**

**G117-1**

Comments (Use other side or attach additional sheets if necessary): I received the draft of  
the Environmental Impact Statement. I noted several pages picturing farm  
fields when in fact it is a High School, a Elementary School and a housing  
community called Victoria Estates. I reference pages 4.8-7; 4.8-19;  
Seeing as how my property line fence is along Gonzalez Road, I have great  
concern with Crystal Energy placing a large diameter line within a few feet  
of my property line and sending pressure up to 1100 psi.  
I recently stood security watch at the Weyerhaeuser cardboard recycle plant  
located on a twenty-three acre site near the Oxnard beach. This plant has  
one line 8" in diameter plainly marked gas. This is one indication to the

No action will be taken until the environmental review process is completed.

G117-1

The maps in Section 4.8 are illustrative of vegetative communities. See Section 4.13.5.2, Alternative DWP Location – Santa Barbara Channel/Mandalay Shore Crossing/Gonzales Road Pipeline for a description of land uses along this alterative. This alternative pipeline routing differs from that proposed in the Project.

In addition, this EIS/EIR addresses the proposed Cabrillo Port project; the Clearwater Port, LLC license application has not been deemed complete by MARAD/USCG and CSLC. Therefore, an EIS/EIR process has not begun for that proposal.

volume of gas consumed at this facility. I noted in the newspaper very soon  
 after the proposal of the LNG lines be permitted to come ashore, Weyerhaeuser  
 petitioned the City Of Oxnard to annex or have zoned a additional thirteen  
 acres for the Weyerhaeuser Corp. operation. I was told by a Weigh-Master at  
 Weyerhaeuser by the name of Steve Garcia, that the company makes more revenue  
 from the cogeneration turbines on site than the cardboard recycle operation.  
 The size of the gas line used by this corporation is easily viewed from the  
 pedestrian sidewalk. Crystal Energy has kept a very low profile in all public  
 meetings. If in fact, the high pressure line does get installed on Gonzalez Rd.  
 I would certainly sell my home. I also question the easement authorization the  
 gas providers from the off shore operation. I realize the easements are all over  
 the County for the 40 psi household supply. I question who gave the easements  
 this high pressure line in residential & school zones. Should this high pressure  
 line cross Oxnard Blvd., it would go under the only coast rail line going North  
 past one more High School and the only Hospital in the city. Numerous shopping  
 centers and existing housing not being specifically mentioned.  
 I feel the man with the money makes the rule and the gas line will eventually  
 come ashore. I just ask that it be routed away from existing housing and schools.  
 If I am right in these statements, please give it serious consideration.  
 If I am mistaken, please advise. I wish you well.

*William J. Donaldson*

G117-2

Section 4.2.8 contains information on safety requirements for pipelines. Section 4.13.1 discusses the proximity of the proposed pipeline routes to residences and schools. The route of the Center Road Pipeline has been modified (see Section 2.1.1).

Comments: The LNG project has been well thought out and hope that those opposed to this project will see that California is in need of better air and better energy resources. This may even help get Natural gas put in to more cars and boats and in to more homes across the US. I'm grateful for the engineers that have come up with such a well thought out and low risk way of getting Natural gas supply here.  
Thank you for listening.

Comments: Living in the mountains of Colorado I appreciate the pristine views and the surrounding nature. I know Colorado is plush with natural gas and there is pressure to develop more means to get this gas. Especially since we are sending it via pipeline to California, California needs to explore additional alternatives to get their natural gas. Cabrillo Port is a wonderful way to increase natural gas imports to your state. Please support this project.

Comments: We had an incident on 11/18/2004 on Platform Gail not far from where this LNG project is to be built and possible be used by LNG. The incident involved the evacuation of 39 workers on the platform when a hydrogen sulfide leak occurred. This put into action Ventura County Naval Base, U.S. Coast Guard Cutter and copter, Ventura County Sheriff and Fire department, Channel Islands Harbor Patrol, Gold Coast Ambulance, and a non-profit company, Clean Seas for clean up. This incident turned out to be minor, but all of our resources were used and G241-1 can't afford to have more traffic off the coast as it is. I'm surprised that Homeland Security isn't involved with the Navy Base here.

G241-1

As discussed under "Emergency Response" in Section 2.2.2.5, the U.S. Coast Guard, which operates as part of the Department of Homeland Security, would be the lead agency to respond to any public safety emergency and would coordinate efforts of other Federal, State, and local agencies.

Comments: According to California Energy Commission reports, increased demand for natural gas coupled with diminishing supply makes facilities like Cabrillo Port absolutely essential to the nation's energy supply. And doesn't every new source of energy make us less reliant on foreign oil? The real question, then, is where the best places are to build these new facilities, and we can't realistically foster "NIMBY" attitudes about this if we expect to flip a switch and have the lights come on – or warm our homes in winter. Seems to me that this proposal addresses a critical question not only of energy supply but also national security! The fact that it appears to be environmentally sensitive and safe is only icing on the cake.

Comments: for oil while trying to expand our resources here at home. We need to seek out more alternatives like natural gas. Australia is providing much needed natural gas to our nation and projects like Cabrillo Port are needed to increase these imports. I am impressed by the logistics of the project and see no reason why it shouldn't happen.

Comments: We need LNG facilities like Cabrillo Port. As a temporary structure, the Cabrillo Port can simply go away once its utility has diminished. If you're burning a fossil fuel...burn a clean one like Natural Gas instead of coal. Experts predict that natural gas will be in short supply as demand rises across the country. We can either continue tearing apart our open spaces for exploratory drilling or get LNG from other countries and convert it into natural gas for our purposes. Or we can pay the high costs of diminished supplies. I hope to see Cabrillo Port developed and functioning.

Comments: While I have no idea what all the different "Acts" and "Regulations" are, I'm please that the Coast Gaurd has done such a thorough job putting this draft EIS/EIR together. I know that our government has gone to great lengths passing bills and laws to protect our environment and social needs when project like this is presented. I have faith in that. It appears to me that BHPB has worked with regulations and redesigned parts of the project to comply. We have all indirectly put these guidelines into place, now we must have faith in them. I support the building of Cabrillo Port and know it will have many positive impacts for our state.

Comments: I wanted to comment on how something like this would impact my business here in Utah. I own a motel and we run everything off of propane. The cost of operating with natural gas as opposed to propane would be significantly lower. Currently there is not enough natural gas in my city to have this source as an option. I would like to see this project be approved. Thank You.

Comments: I live in Green River, Utah, but I feel that even though this project is in California that it will also impact the rest of the country in a good way. California is not the only state in need of a cleaner, lower priced source of fuel, bus also every where else is experiencing the same energy situation. I am for this project as it will help to someday bring a lower costing, more efficient means of energy to my businesses. Thank You.

Comments: The process of using natural gas has been used for many many decades. The modern facilities used today make the process even safer. This non-toxic and non-corrosive form of natural gas is vital to addressing our states energy needs. Any concerns about the safety of natural gas production are mitigated by the fact that is project is located in the middle of the sea. This is a viable and sensible solution that California desperately needs

 Comments: The accelerated timeline doesn't allow for adequate study. You need to extend the timeline in order to do a thorough environmental impact statement before placing this LNG port off our coast. The enviro impact report should also include other options as by putting this port in, we will be tying ourselves more than ever to offshore sources of energy, to locked in energy prices like in the last California energy crises and further delaying the transition to alternative energy sources and energy conservation. Thank you.  
 Sincerely,  
 John Dutton

## G220-1

All deepwater port applications fall under the authority of the Deepwater Port Act, which requires that a decision on the application be made within 330 days of the publication of the Notice of Application in the Federal Register. The Notice of Application for the Cabrillo Port Project was published in the Federal Register on January 27, 2004. Although the comment period (53 days) could not be extended at that time, a March 2006 Revised Draft EIR was recirculated under the CEQA for an additional public review period of 60 days. Section 1.4.1 contains additional information on this topic.

Section 1.5 contains information on opportunities for public comment. After the MARAD final license hearing, the public will have 45 days to comment on the Final EIS/EIR and the license application. The Federal and State agencies will have an additional 45 days to provide comments to the MARAD Administrator. The Administrator must issue the Record of Decision within 90 days after the final license hearing. The CSLC will hold a hearing to certify the EIR and make the decision whether to grant a lease. The California Coastal Commission will also hold a hearing. Comments received will be evaluated before any final decision is made regarding the proposed Project.

## G220-2

Section 1.2.4 contains information on foreign sources of natural gas. Sections 3.3.1 and 3.3.2 address conservation and renewable energy sources as alternatives to the Project within the context of the California Energy Commission's 2005 Integrated Energy Report and other State and Federal energy reports.

Comments: The 2000 electricity crisis hurt a lot of families and business in California, especially here in San Diego County. As I understand it, one of the major causes of the dramatic increase in electricity rates was a lack of available supply of natural gas for our power plants to generate electricity. As a Californian I am concerned that we look to the future and plan for our growth and development now. The Cabrillo Deepwater Port looks to me like a sensible solution to provide a reliable source of natural gas for our homes and our electrical plants.
